This document lists fragrance allergens according to Regulation (EC) No 1223/2009 including the Commission Regulation (EU) 2023/1545 of July 26 2023 amending the regulation as regards labeling of fragrance allergens in cosmetic products.

The quantification of the presence of each substance is based on the amount entering a product by direct addition, as well as the amounts arising as constituents of natural essential oils and extracts, and by impurities in synthetic ingredients, if applicable.

Concentrations are given in % weight in the formula. Concentrations listed as “—“ indicate that the substances are <1ppm and generally below the level of detection using the standard methods developed by the International Fragrance Association (IFRA). The figures indicated here are based on historical maximum values and information given by suppliers.

Based on information from the manufacturer, CandleScience cannot guarantee the total absence of allergens in the fragrance or that the fragrance meets the requirement of the EU technical document on cosmetic claims (implemented July 1, 2019) which states that “The claim free from allergenic/sensitizing substances is not allowed” and “if a cosmetic product claims to be hypoallergenic, the presence of known allergens or allergen precursors should be totally avoided."

The information contained in this document is accurate to the best of CandleScience’s knowledge. CandleScience is not liable for any damages that may result from the misuse of the data. It is the Customer's responsibility to perform their own evaluations on the fragrance with respect to end-use applications. Any Customer product, marketing or other claims are Customer's sole responsibility.
